Porsche: 21st century 2002-2019 - Karl E. Ludvigsen 2019

In Book 4 of Porsche: Excellence Was Expected Karl Ludvigsen recounts the dramatic events of 2008-09 that cast a deep shadow over what had been the world's most profitable car maker. Although Porsche became part of the VW Group, as a consequence of their maneuvers the Porsche and Piëch families achieved effective control of that vast corporation. Porsche's reaction to the financial ructions was to launch one great new car after another. Among them was the sensational 918 Spyder, the hypercar whose first appearance at Geneva in 2010 went a long way to show that Porsche was still Porsche. These were also the years of the creation and launch of the mid-engined Cayman coupe, which soon established a reputation as one of the world's best-handling sports cars. In 2016 Boxster and Cayman were joined at the hip under the "718" title, a tribute to the great sports-racers of the 1950s and 1960s that carried that project number. In 2009 Porsche introduced the Panamera, its most controversial offering since the Cayenne. Many of the Panamera's components were shared with the Cayenne, which received a major upgrade in 2017. Since the 2014 model year it had a cheeky little sister, the Leipzig-built Macan. Although derived from the Audi Q5, the Macan was a Porsche through and through. Also a fast seller, the Macan secured Porsche's financial future. Flying the all-important sports-car flag was the evergreen 911 Carrera, first with the 997 and then the 991. The 992 arrived as a 2020 model with all the bells and whistles needed to keep it at the top of its class. Although a hybrid variant of the 992 was not imminent, most of the production Porsches were taking advantage of the exploits of the 919 Hybrid. Starting in 2015, this brilliantly engineered LMP1 racer won the 24 Hours of Le Mans three years running, testifying to Porsche's competitiveness. On the horizon was the all-electric Taycan pointing the way to the legendary sports-car maker's future.

Kill the Company - Lisa Bodell 2016-10-21

In the ever-changing world of business, we've arrived at a point where process has trumped culture, where the race toward efficiency has left us unable to reach our potential. Stuck in the land of status quo, we've forgotten how to think. The very structures put in place to help businesses grow are now holding us back;; it's time to Kill the Company. This book is a call to arms: to start a revolution in how we think and work. But instead of more one-size-fits-all change initiatives forced upon employees, we need to embrace small changes that create ripple effects throughout the organization. Lisa Bodell urges companies to move from "Zombies, Inc." to "Think, Inc." Thinking can no longer be exclusive to the creative team or lead strategists. A culture of curiosity must be fostered among the ranks to shake up our standard practices, from unproductive meetings to go-nowhere strategic planning. This revolution can and will awaken our ability to think, and ultimately, to innovate and grow.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council 2015-09-28

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National

Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
