Everyday Lifestyles and Sustainability - Fabricio Chicca 2018-04-09

The impact of humanity on the earth overshoots the earth's bio-capacity to supply humanity's needs, meaning that people are living off earth's capital rather than its income. However, not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts. The contributors describe daily life in many different places in the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints. This leads to comparison and discussion of what living within the limits of the planet might mean. Current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives. This book takes a 'bottom-up' approach by calculating the footprints of daily living. The purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future. Offering a global perspective on the question of sustainable living, this book will be of great interest to anyone with a concern for the future, as well as students and researchers in environmental studies, human geography and development studies.

Jue 477 - Martin Port 2020-09

Revealed to the world in 1948, the Land-Rover not only revived the Rover Company's fortunes in an austerity-riddled post-war period, but galvanized its future, thanks to the model's almost immediate success. With the manufacture of an initial 48 'pre-production' examples coming to a close, the first official production models were assembled - starting with chassis 860001. As original factory records prove, this pivotal vehicle was destined for His Royal Highness King George VI, but the decision was made to postpone the presentation and instead, 'number one' was retained by the factory until 1950, when it was registered JUE 477 before leaving Rover Company ownership. After decades left out in the cold and exposed to the elements, 860001 had certainly seen better days, but thanks to the determination of Sir Jim Ratcliffe, founder and Chairman of INEOS, the future of JUE 477 was secured in 2017. Over the next two years, a dedicated team of experts, led by chief restorer, Julian Shoolheifer set about restoring the vehicle while retaining as much of its original DNA as was physically, and safely, possible and making sure that this remarkable vehicle's history and past life was still worn with pride.
