Novum Organum - Francis Bacon 2020-02-19

Sir Francis Bacon's "Novum Organum" is a treatise meant to adjust the thought and methodology of learning about and understanding science and nature. Learn about the four Idols and the inductive method outlined in this keystone philosophy work. This is now known as the Baconian method. The title is a reference to Aristotle's work Organon, which was his treatise on logic and syllogism. Ultimately, the Novum Organum is defined as the "New Tool." But, a new tool for what, and why is it 'new'? In this book Bacon demonstrates the use of the scientific method to discover knowledge about the natural world. Many of the examples in this volume concern the nature of heat and energy.

Responses of Organisms to Water Stress - Sener Akinci 2013-01-16

The same amount of water has been present on our planet for about 4 billion years, since shortly after the Earth was formed. Since then it has cycled through evaporation, condensation, precipitation and surface runoff multiple times. Water scarcity as an abiotic factor ranging from moderate to severe stress levels, accompanied by loss of moisture in the

soil, is extremely hard for most organisms to cope with, particularly terrestrial plants and their food-chain dependents. Because of the potential for increasing temporary, or possibly permanent, drought conditions in the future, there is intense focus on improving plant resistance to drought and increasing yield performance in water-limited environments through genotype selection in important crops. This book aims to contribute to understanding of how plants and other organisms respond to water stress conditions, and the various survival strategies adopted under differing moisture levels.

Completing College - Vincent Tinto 2012-04-15

Even as the number of students attending college has more than doubled in the past forty years, it is still the case that nearly half of all college students in the United States will not complete their degree within six years. It is clear that much remains to be done toward improving student success. For more than twenty years, Vincent Tinto's pathbreaking book *Leaving College* has been recognized as the definitive resource on student retention in higher education. Now, with *Completing College*, Tinto offers administrators a coherent framework with which to develop

and implement programs to promote completion. Deftly distilling an enormous amount of research, Tinto identifies the essential conditions enabling students to succeed and continue on within institutions. Especially during the early years, he shows that students thrive in settings that pair high expectations for success with structured academic, social, and financial support, provide frequent feedback and assessments of their performance, and promote their active involvement with other students and faculty. And while these conditions may be worked on and met at different institutional levels, Tinto points to the classroom as the center of student education and life, and therefore the primary target for institutional action. Improving retention rates continues to be among the most widely studied fields in higher education, and *Completing College* carefully synthesizes the latest research and, most importantly, translates it into practical steps that administrators can take to enhance student success.

The World of Unseen Spirits - Bernard N. Schneider 1975

Theologies in the Old Testament - Richard S. Gerstenberger 2002-08-01
The author here offers a radical departure from traditional treatments of Old Testament theology. Rather than offering a systematic approach, he discusses the various theological voices coming from different social settings within ancient Israel: the family and the clan, village, tribal alliance, and kingdom. Gerstenberger concludes with his reflections on how the biblical witness informs contemporary theology, and must be contextual and ecumenical in order to be authentic.

Guide to Thomas Aquinas - Josef Pieper 2009-08-13

Social History of Knowledge - Peter Burke 2013-05-31

In this book Peter Burke adopts a socio-cultural approach to examine the changes in the organization of knowledge in Europe from the invention of printing to the publication of the French Encyclopédie. The book opens with an assessment of different sociologies of knowledge from Mannheim to Foucault and beyond, and goes on to discuss intellectuals as a social group and the social institutions (especially universities and academies)

which encouraged or discouraged intellectual innovation. Then, in a series of separate chapters, Burke explores the geography, anthropology, politics and economics of knowledge, focusing on the role of cities, academies, states and markets in the process of gathering, classifying, spreading and sometimes concealing information. The final chapters deal with knowledge from the point of view of the individual reader, listener, viewer or consumer, including the problem of the reliability of knowledge discussed so vigorously in the seventeenth century. One of the most original features of this book is its discussion of knowledges in the plural. It centres on printed knowledge, especially academic knowledge, but it treats the history of the knowledge 'explosion' which followed the invention of printing and the discovery of the world beyond Europe as a process of exchange or negotiation between different knowledges, such as male and female, theoretical and practical, high-status and low-status, and European and non-European. Although written primarily as a contribution to social or socio-cultural history, this book will also be of interest to historians of science, sociologists, anthropologists, geographers and others in another age of information explosion.

A Reformation Debate - Jean Calvin 2000

In 1539, Cardinal Jacopo Sadoleto, Bishop of Carpentras, addressed a letter to the magistrates and citizens of Geneva, asking them to return to the Roman Catholic faith. John Calvin replied to Sadoleto, defending the adoption of the Protestant reforms. Sadoleto's letter and Calvin's reply constitute one of the most interesting exchanges of Roman Catholic/Protestant views during the Reformation and an excellent introduction to the great religious controversy of the sixteenth century. These statements are not in vacuo of a Roman Catholic and Protestant position. They were drafted in the midst of the religious conflict that was then dividing Europe. And they reflect too the temperaments and personal histories of the men who wrote them. Sadoleto's letter has an irenic approach, an emphasis on the unity and peace of the Church, highly characteristic of the Christian Humanism he represented. Calvin's reply is in part a personal defense, an *apologia pro vita sua*, that records his own religious experience. And its taut, comprehensive argument is characteristic of the disciplined and logical mind of the author of *The Institutes of the Christian Religion*.

Taking Science to School - National Research Council 2007-04-16

What is science for a child? How do children learn about science and how to do science? Drawing on a vast array of work from neuroscience to classroom observation, *Taking Science to School* provides a comprehensive picture of what we know about teaching and learning science from kindergarten through eighth grade. By looking at a broad range of questions, this book provides a basic foundation for guiding science teaching and supporting students in their learning. *Taking*

Science to School answers such questions as: When do children begin to learn about science? Are there critical stages in a child's development of such scientific concepts as mass or animate objects? What role does nonschool learning play in children's knowledge of science? How can science education capitalize on children's natural curiosity? What are the best tasks for books, lectures, and hands-on learning? How can teachers be taught to teach science? The book also provides a detailed examination of how we know what we know about children's learning of science--about the role of research and evidence. This book will be an essential resource for everyone involved in K-8 science education--teachers, principals, boards of education, teacher education providers and accreditors, education researchers, federal education agencies, and state and federal policy makers. It will also be a useful guide for parents and others interested in how children learn.

Bodin : on Sovereignty : Six Books of the Commonwealth - Jean Bodin 2009-04-28

The Six Books of the Commonwealth was the first modern attempt to construct an elaborate system of political science. It is perhaps the most important work of its kind between Aristotle and modern writers. To the public finances, which he called "the sinews of the state," he devoted much attention, and insisted on the duties of the government in respect to the right adjustment of taxation. In general he deserves the praise of steadily keeping in view the higher aims and interests of society in connexion with the regulation and development of its material life. Jean Bodin (1530-1596) was born in Angers, France, and became a French jurist and political philosopher, member of the Parlement of Paris and professor of law in Toulouse. He is best known for his theory of sovereignty.

A Commentary on the Holy Scriptures - Johann Peter Lange 1869

Business Bullshi André Spicer 2017-09-11

Our organizations are flooded with empty talk. We are constantly "going forward" to lands of "deliverables", stopping off on the "journey" to "drill down" into "best practice". Being an expert at using management speak has become more important in corporate life than delivering long lasting results. The upshot is that meaningless corporate jargon is killing our organizations. In this book, management scholar the author argues we need to call this empty talk what it is: bullshit. The book looks at how organizations have become vast machines for manufacturing, distributing and consuming bullshit. It follows how the meaningless language of management has spread through schools, NGOs, politics and the media. Business Bullshit shows you how to spot business bullshit, considers why it is so popular, and outlines the impact it has on organizations and the people who work there. It also outlines what we can do to minimise bullshit at work. The author makes a case for why organizations need to avoid empty talk and reconnect with core activities.

Discourse on the Method - René Descartes 1996-01-01

Descartes' ideas not only changed the course of Western philosophy but also led to or transformed the fields of metaphysics, epistemology, physics and mathematics, political theory and ethics, psychoanalysis, and literature and the arts. This book reprints Descartes' major works, Discourse on Method and Meditations, and presents essays by leading scholars that explore his contributions in each of those fields and place his ideas in the context of his time and our own. There are chapters by David Weissman on metaphysics and psychoanalysis, John Post on epistemology, Lou Massa on physics and mathematics, William T. Bluhm on politics and ethics, and Thomas Pavel on literature and art. These essays are accompanied by others by David Weissman and by Stephen Toulmin that introduce the idea of intellectual lineages, discuss the period in which Descartes wrote, and reexamine the premises of his philosophy in light of contemporary philosophical, political, and social thinking.

The Way of Jesus Christ - Jürgen Moltmann 1993

The Way of Jesus Christ discusses the following topics: 1. The symbol of the way embodies the aspect of process and brings out christology's alignment towards its goal. This symbol can comprehend Christ's way from his birth in the Spirit and his baptism in the Spirit to his self-surrender on Golgotha. It also makes it possible to understand the path of Christ as the way leading from his resurrection to his parousia-the way he takes in the Spirit to Israel, to the nations, and into the breadth and depth of the cosmos. 2. The symbol of the way makes us aware that every human christology is historically conditioned and limited. Every human christology is a 'christology of the way, ' not yet a 'christology of the home country, ' a christology of faith, not yet a christology of sight. So christology is no more than the beginning of eschatology; and eschatology, as the Christian faith understands it, is always the consummation of christology. 3. Finally, but not least important: every way is an invitation. A way is something to be followed. 'The way of Jesus Christ' is not merely a christological category. It is an ethical category too. Anyone who enters upon Christ's way will discover who Jesus really

is; and anyone who really believes in Jesus and the Christ of God will follow him along the way he himself took. Christology and christopraxis find one another in the full and completed knowledge of Christ. This christology links dogmatics and ethics in closer detail than in the previous volumes.
