*Innovation and Teaching Technology* - Marta Peris-Ortiz 2014-04-03  
This book focus on organizational changes that are taking place in higher education. Universities are currently experiencing a period of change and restructuring into what is known as the European Higher Education Area (EHEA). EHEA represents a process of educational reform based on three types of transformations: structural, curricular and organizational. The integration of universities in this new EHEA is bringing conceptual and methodological changes not just to the structure of university education, but also to the teaching-learning processes and the conditions under which they take place. EHEA is prompting a change in the teaching model towards the consideration of students as the main actors in the educational process. This change requires new teaching strategies where students are asked to resolve problems with tools provided by the teacher. This book presents ideas, results and challenges related to new information and communication technologies, innovations and methodologies applied to education and research, as well as demonstrating the latest trends in educational innovation.

*Sustainable Innovation* - Cosmina L. Voinea 2021-04-14  
The most important theme of the discourse on sustainable development and sustainability challenges concerns the relationship between innovation and sustainability. This book represents a realistic critical overview of the state of affairs of sustainable innovations, offering an accessible and comprehensive diagnostic point of reference for both the academic and practitioner worlds. In order for sustainable innovation to truly become mainstream practice in business it is necessary to find out how organizations can strategically and efficiently accommodate sustainability and innovation in such a manner that they accomplish value capturing (for firms, stakeholders, and for society), not merely creating a return on the social responsibility agenda. Addressing this challenge, the book draws together research from a range of perspectives in order to understand the potential shifts and barriers, benefits, and outcomes from all angles: inception, strategic process, and impact for companies and society. The book also delivers insights of (open) innovation in public sector organizations, which is not so much a process of invention as it is one of adoption and diffusion. It examines how the environmental pillar of the triple bottom line in private firms is often a by-product of thinking about the economic pillar, where cost reductions may be achieved through process innovation in terms of eliminating waste and reducing energy consumption. The impact of open innovation on process innovation, and sustainable process innovation in particular, is an underexplored area but is examined in this book. It also considers the role of the individual entrepreneur in bringing about sustainable innovation; entrepreneurs, their small- and medium-sized enterprises (SMEs), as well as the innovation ecosystems they build play a significant role in generating sustainable innovations where these smaller organizations are much more flexible than large organizations in targeting societal needs and challenges. The readership will incorporate PhD students and postgraduate researchers, as well as practitioners from organizational advisory fields.

*An Heraldic Alphabet* - John Philip Brooke-Little 1996

*Enhancing Security, Sustainability and Resilience in Energy, Food and Water* - Marko Keskinen 2020-03-10

This book looks at the ways that energy, food, and water help to create connections between sustainability and security. The concept of security is in our current societies increasingly connected with sustainability, which seeks to ensure that we as humans are able to live and prosper on this planet now and in the future. The concepts of energy security, food security, and water security—used separately or together—manifest the

burgeoning linkages between security and sustainability. This book brings together ten scientific articles that look at different aspects of security, sustainability, and resilience with an emphasis on energy, food, and/or water in the context of Finland and Europe. Together, the articles portray a rich picture on the diverse linkages between both energy, food, and water, and between security and sustainability. In sum, the articles and related preface conclude that ensuring sustainable security—or secure sustainability—requires systemic, structured processes that link the policies and actors in these two important but still distant fields.

*Oysters and Clams* - Jesus L. Romalde 2016-05-01

Bivalve molluscs are scientifically and economically important invertebrates. Among them, oysters and clams dominate other species with respect to global distribution and aquaculture production. Recently, with research advancements in farming technology, environmental monitoring and disease control, as well as the diversification of cultured species, new findings and outcomes have emerged. This book presents a compilation of the latest research on oyster and clam culture, including aspects of ecological distribution and management, disease, physiological responses to environmental stressors or host-pathogen interactions, in most cases from a multidisciplinary approach.

*Jujol* - Ignasi Solà-Morales Rubió 1991

Traces the career of the turn of the century Spanish architect, shows his designs for homes, apartments, schools, and churches, and discusses his unique, organic style

*Commercial Directory of Latin America (Classic Reprint)* - Bureau Of The American Republics 2018-08-11

Excerpt from Commercial Directory of Latin America In compliance with the requests of many merchants and manufacturers who desire to send Catalogues and Circulars to importers and dealers in Mexico, Central and South America, the Bureau of the American Republics has undertaken to publish a series of Commercial Directories of the several countries and colonies. The difficulty of securing the names and addresses of merchants has been greater than was anticipated, particularly those in cities and towns where there are no consular officers of the United States, and the lists herein given will be found incomplete. They are, however, as complete and accurate as the Bureau can make them with the present facilities at its command, and will doubtless be found useful to those who desire to introduce their wares to the knowledge of buyers on the southern continent. Any additions and corrections for subsequent publications will be appreciated. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. *Conix Architects* - Conix Architects (Firm) 2007

Conix Architects has grown steadily over the years, but its expansion has gained momentum in particular over the last couple of years. Founded in 1979 by Christine Conix, the architectural practice has offices in both Antwerp and Brussels (since 2004). The firm has a team of 67 creative and motivated individuals. Sylvie Bruyninckx became a partner in 2005. Conix Architects strive for a type of architecture that integrates four

basic ideas: context, durability, society and know-how, which is always characterized by its open and spatial concept. The needs, desires and expectations of the client are translated into unique contemporary projects. Conix Architects created this book, with contributions by Kas Oosterhuis and Moniek E. Bucquoye. This publication provides an overview of the body of their outstanding projects, conceptual ideas and background information on their current and future ambitions.

**Latin America** - Richard G. Boehm 1984

"!No Pasarán!" - Stephen Hart 1988

The six essays collected in this volume are a selection from a number of papers which were given at a one-day colloquium on 'Art, Literature and the Spanish Civil War' which was held in Westfield College on 18 July 1986, precisely fifty years to the day after Franco's military coup in the Canary Islands, which was destined to have such a decisive effect on the course of Spanish history. Though this date subsequently became a Francoist celebration - the so-called 'Dia del Alzamiento' (Day of the Uprising) - the papers collected here do not demonstrate a Francoist bias. The overall approach is intertextual and interdisciplinary, thereby stressing the international nature of the artistic response to the war. For the benefit of the English reader, all foreign quotations are followed by an English translation.

Plant Biotechnology and In Vitro Biology in the 21st Century - Altman 1999-06-30

These proceedings contain a variety of scientific achievements and techniques presented at a 1998 international congress on plant biotechnology. Achievements today have already surpassed all previous expectations, and the field is now on the verge of creating the "evergreen revolution".

Urban Heat Stress and Mitigation Solutions - Vincenzo Costanzo 2021-09-09

This book provides the reader with an understanding of the impact that different morphologies, construction materials and green coverage solutions have on the urban microclimate, thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas. The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale, and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate. Despite its relevance, only limited literature is currently devoted to appraising—from an engineering perspective—the intertwining relationships between urban geometry and fabrics, energy fluxes between buildings and their surroundings, outdoor microclimate conditions and building energy demands in urban areas. This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale, while emphasizing the role played by

different spatial arrangements, manmade materials and green infrastructures on the outdoor microclimate. The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians, and on the buildings' energy demand for space heating and cooling. Then, based upon cutting-edge experimental activities and simulation work, this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment, such as cool materials, thermochromic and retroreflective finishing materials, and green infrastructures applied either at a building scale or at the urban scale. The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions. Finally, the book opens a wider perspective by introducing the basic elements that allow fuel poverty, raw materials consumption, and the principles of circular economy in the definition of a resilient urban settlement.

Headstrong - Samantha Nutt 2020-01-07

From Samantha Nutt, award-winning humanitarian and #1 bestselling author of *Damned Nations: Greed, Guns, Armies and Aid*, comes a sharp and incisive exploration of the geopolitical forces shaping women's lives throughout the world, and what this means for the future of feminism. The first two decades of the 21st century were on track to be better for women than any other period in human history. More women were entering politics. There were more women running countries and companies than ever before. The gender wage gap was shrinking. A woman very nearly became President of the United States. The #MeToo movement challenged the secrecy and complacency surrounding sexual abuse and harassment, putting entire industries on notice. If feminism had a victory lap, this should have been it. Yet just as woman seemed to be entering this new, postfeminist world, the forces mobilizing against them grew stronger and louder. A man accused of sexually harassing almost two dozen women became President. Another man accused of sexual misconduct was appointed, much like Clarence Thomas more than two decades before him, to the Supreme Court. Men's rights groups were not only expanding but entering the mainstream, blaming women and feminism for their declining opportunities. Elsewhere in the world, one of the most brutally misogynistic movements in modern history, Daesh (ISIS), was building out its network from the Middle East to Africa and South Asia. The Taliban entered into negotiations with the United States as part of a power-sharing "peace deal" in Afghanistan. In North America, the Incel (involuntary celibate) movement is linked to attacks on civilians in high schools, college campuses, businesses and city streets. Mixing razor-sharp analysis with personal anecdotes, Sam lays out the connections between these shifting events and what they mean for the future of women and girls. With a career spanning more than two decades working in some of the most war-ravaged regions of the world, she addresses the tough questions about the imperfect progress of feminism and the ongoing, devastating backlash against women's equality. A highly engaging, evocative and entertaining story-teller, Sam explores what it means to be a woman in the world right now—the contradictions and frustrations—and how women can lead through these challenges. *Headstrong* is a poignant, honest and insightful look at women that bridges the personal with the political, touching on the local and global dimensions of feminism. Navigating a sphere often dominated by men (war), Sam has emerged as one of the most engaging and intrepid voices in the geopolitical arena, offering both a timely and critical take on modern events.

Medieval Heraldry - Terence Wise 2012-04-20

Coats of arms were at first used only by kings and princes, then by their great nobles, but by the mid-13th century arms were being used extensively by the lesser nobility, knights and those who later came to be styled gentlemen. In some countries the use of arms spread even to merchants, townspeople and the peasantry. From the mundane to the fantastic, from simple geometric patterns to elaborate mythological beasts, this fascinating work by Terence Wise explores the origins and appearance of medieval heraldic devices in an engagingly readable style accompanied by numerous illustrations including eight full page colour plates by Richard Hook.

*BUILDING THE FUTURE* Ulrich Pfammatter 2008

"How have innovations in architecture and engineering come about? Who tested new approaches and when were important discoveries and experiments accepted? This book illuminates the history and development of building, in all its constructive, technical and cultural aspects, from the Industrial Revolution to the present and into the future. One hundred case scenarios articulate how new ideas, their context and ideology, became integral parts of the build environment. It also discusses which technical and creative mediums the pioneers and protagonists of the various trends and schools of thought used to articulate their ideas. The insightful texts and numerous images make this volume an essential handbook of architectural and structural history for students and professionals."--BOOK JACKET.

**Prefabricated Systems** - Ulrich Knaack 2012-12-13

For a number of years, modular construction - the use of prefabricated elements in architecture - has once again become a subject of lively discussion and debate. Long written off as monotonous, today's building components are actually highly differentiated and capable of supporting and enhancing the architect's creativity. Numerous structures work with prefabricated components; for single-family homes the figure is ninety-eight percent, and modular systems are available that meet high aesthetic standards. This book provides an overview of the various different systems and their possible uses, particularly in the areas of housing, office, and industrial buildings. It explains the processes and components of modular construction and the behavior of the various materials when this construction approach is used. The authors offer strategies for planning and designing with prefabricated systems so that

the architect can use them productively. Numerous drawings explain the principles of modular construction, while built examples forge a link between those principles and the practical activity of building.

**Tree Biotechnology** - Kishan Gopal Ramawat 2014-04-01

Forest trees cover 30% of the earth's land surface, providing renewable fuel, wood, timber, shelter, fruits, leaves, bark, roots, and are source of medicinal products in addition to benefits such as carbon sequestration, water shed protection, and habitat for 1/3 of terrestrial species. However, the genetic analysis and breeding of trees has lagged behind that of crop plants. Therefore, systematic conservation, sustainable improvement and pragmatic utilization of trees are global priorities. This book provides comprehensive and up to date information about tree characterization, biological understanding, and improvement through biotechnological and molecular tools.

**Harquitectes. 2G / #74** - 2016-07

Harquitectes is an architectural firm founded in 2006 in Sabadell, near Barcelona. The studio addresses the current economic crisis by adapting its work to commissions, from public buildings such as schools to single-family houses. This publication is the first comprehensive monograph on its work.

*Vernacular Architecture* Camilla Mileto 2014-08-28

Sustainability is a concept that has monopolised a large number of the scientific debates in a wide range of spheres connected not only with architecture, urban planning and construction, but also with the product market, tourism, culture, etc. However, sustainability is indissolubly linked to vernacular architecture and the lessons this architecture of the past can teach us for the future. The concept of sustainability as it is presented is wide-reaching and encompasses not only environmental issues but also sociocultural and socioeconomic questions. The lessons we can learn from studying vernacular architecture in these three broad spheres are manifold, and can help us not only to further the conservation and retrieval of this architecture already in existence but to rethink new architecture in the light of what we have learned.

Vernacular Architecture: Towards a Sustainable Future will be a valuable source of information for academics and professionals in the fields of Environmental Science, Civil Engineering, Construction and Building Engineering and Architecture.

**The Future Depends on Education Majors** - Watson Journals 2019-07-23

This planner runs from August 1 to December 31 for Education students to plan and be prepared for their first semester of the 2020 academic year. This Education Major Planner is just 90 pages so it will not take up much space compared to the student's other books, and it is specifically designed to help the education student be more productive and help you map out your academic goals. The first part of the planner includes space to list ALL important class and assignment information and then keep track of those assignments, projects, quizzes, and tests using the weekly planner for the semester. Lastly, there is plenty of space remaining for notes and reminders or anything else that the student wants to remember.

**Smart Materials in Architecture, Interior Architecture and Design** - Axel Ritter 2006-11-21

The use of smart materials in architecture is a dynamic and innovative area merging research, development, and use. Smart materials, with their reversible characteristics, respond to stimuli such as light, temperature, and electrical field by changing their form, color, viscosity, etc. One of the most fascinating developments is the advent of Phase Change Materials. These materials make it possible, for example, to develop self-acting, kinetic facades and wallpaper that changes its color and pattern based on temperature and light. The book presents the development of these materials and also describes their use in the contexts of architecture, design, and art. It offers a systematic overview with a detailed discussion of properties, technologies, products, and projects based on twenty groups of smart materials.
