Sustainable Blue Revolution in India
Shenoy 2021-05-31

This book provides comprehensive information on several dimensions of blue revolution in a structured form. Material provided in the book has been gathered from several relevant published sources and views expressed are based on practical field experience of the authors. Blue revolution would be one of the big game changers for the Indian economy. The subject of sustainable development of fisheries sector being very vast, concerted efforts have been made to accommodate all the relevant elements. Very little reading material with proper analysis is currently available and this book is expected to bridge the gap and project way-forward to achieve sustainable development of fisheries and aquaculture in India under the blue revolution. The book is organised under 13 chapters covering wide ranging subjects that include fish production, processing, marketing, exports/imports of fishery products; ecolabelling;

role of industry in promoting sustainability in fishing and aquaculture; sustainability issues in marine/inland fisheries/aquaculture; and fisheries regulations and legislations. Information has been provided on Sustainable Development Goals(SDGs) particularly SDG 14 (Life Below Water); components of blue economy; Government of India fisheries development initiatives; and executive summary of recently launched PMMSY. Emerging plant and cell-based seafood segment; overall impacts of climate change; and impact of recent pandemic COVID-19 on fisheries and aquaculture are discussed under separate chapters. Finally, a chapter on 'Way Forward' is included that suggests practical management measures, technology infusion, technical interventions along with few innovative concepts and approaches towards achieving blue revolution. Note: T&F does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

The Feeding of the Nine Billion - Alex Evans
2009

Global food prices have eased significantly from their record highs in the first part of 2008. As a worldwide economic downturn has gathered pace, commodity markets have weakened significantly. By October 2008, the UN Food and Agriculture Organization's F

OECD-FAO Agricultural Outlook 2021-2030 -
Food and Agriculture Organization of the United Nations 2021-07-05

The Agricultural Outlook 2021-2030 is a collaborative effort of the Organisation for Economic Co-operation and Development (OECD) and the Food and Agriculture Organization (FAO) of the United Nations. It brings together the commodity, policy and country expertise of both organisations as well as input from collaborating member countries to provide an annual assessment of the prospects for the coming decade of national, regional and global agricultural commodity markets. The

publication consists of 11 Chapters; Chapter 1 covers agricultural and food markets; Chapter 2 provides regional outlooks and the remaining chapters are dedicated to individual commodities.

Beef Cattle Production and Trade - Lewis Kahn
2014-04-15

Covers all aspects of the beef industry from paddock to plate.

Food Safety Law in China - Francis Snyder
2015-12-18

Francis Snyder shows how the 2008 infant formula crisis led to transnational food safety law and standards in China, reforms in government policy and closer relations with international organisations. He also makes recommendations for dealing with continuing challenges.

Agro-industries for Development -

2009-01-01

The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. This book addresses strategies required for improving agro-industrial competitiveness in ways that can generate employment and fight poverty in the developing world.

Cattle husbandry in Eastern Europe and China - Abele Kuipers 2014-01-15

This book presents an analysis of the dairy and associated sector developments in Eastern Europe and China. The transition in cattle husbandry in Eastern Europe, resulting in enormous structural changes, but not in an increased production volume, is different from emerging countries, like China, where traditional small scale farming goes together with the remodelling or start of mega farms. Capacity building by means of cooperation appears to be hindered by historical experience.

Farm development paths were studied in more depth in Poland, Lithuania and Slovenia using detailed farmer surveys. Farmers' strategies, availability of resources, and opportunities and threats were analysed, and interactive group trainings in strategic management were part of the analysis. The results are presented here. Although farmers showed similar wishes concerning farm development, the local environment and policies determines the degree of achievement. Farm fragmentation, the high percentage of rented land and availability of suitable labour are major constraints. Future EU policies are a concern but new technologies are embraced. This book is a must for those interested in the transition in Eastern Europe. It is indispensable to consultants, marketers, companies, farm leaders and government officials in agriculture.

North American Food & Agribusiness Outlook - 2007

Green Banking and Green Central Banking -

Andreas Dombret 2021-10-11

The book deals with the questions that really matter for green finance: Where will the money to finance the transition to a low carbon environment come from, how far do the banks' balance sheets stretch and where will the rest of the money come from? How much can we rely on the capital markets, especially in the EU, to get money to the parts of the economy which really need it, without greenwashing? How do governments organize not just a transition, but a just transition to a low carbon environment? Is it time to revisit received ideas about the proper role for central banks?

Pathologies of Climate Governance Paul G.

Harris 2021-02-25

Earth's climate is in crisis. Climate governance has failed. This book diagnoses climate governance as if it were a sick patient, uncovering the fundamental factors causing the worsening climate crisis. It distils decades of

global climate negotiations to reveal the features of international relations that are impeding climate action, and it identifies political obstacles to climate governance across a variety of countries in the Americas, Asia, and Europe. The psychosocial aspects of climate change are explored to show how human nature, overconsumption, and global capitalism conspire to stymie climate action. Remedies are suggested for how to overcome hurdles to effective climate governance internationally and nationally, with ideas provided for individuals to help them align their own interests with those of the global environment. Covering all of the major recent events in climate politics and governance, this is an accessible book for concerned readers who want to understand the climate crisis.

[Integrated Wastewater Management and Valorization using Algal Cultures](#) - Goksel N.

Demirer 2022-03-24

Integrated Wastewater Management and Valorization using Algal Cultures provides a

holistic view on coupled wastewater treatment and biomass production for energy and value-added products using algal cultures. Algal cultures provide low-cost nutrient (nitrogen and phosphorus) treatment and recovery from wastewaters, carbon-dioxide sequestration from waste gases, value-added generation in the form of bio-energy and bio-based chemicals, biosorption of heavy metals and biogas upgrading. The book addresses all these aspects in terms of role of algal cultures in environmental sustainability and circular economy. The production of high value products is addressed through pretreatment and anaerobic co-digestion of wastewater-derived microalgal biomass and microalgal biorefineries. The simultaneous dissolution and uptake of nutrients in microalgal treatment of anaerobic digestate is discussed, as is coupled electrocoagulation and algal cultivation for the treatment of anaerobic digestate and algal biomass production. Finally, optimization of

algal biomass production is discussed using metagenomics and machine learning tools, and scale-up potential and the limitations of integrated wastewater-derived microalgal biorefineries is discussed. Integrated Wastewater Management and Valorization using Algal Cultures offers an integrated resource on wastewater treatment, biomass production, bioenergy and value-added product generation for researchers in bioenergy and renewable energy, environmental science and wastewater treatment, as well as environmental and chemical engineering. Comprehensively covers methods of wastewater treatment by algal cultivation and algal utilization Integrates the applications of algal cultures across wastewater treatment, nutrient recycling, CO₂ sequestration, bio-energy and bio-based product generation Provides several international case studies to showcase actual algae-based pilot projects and facilities
Corporate Sustainability - Jan Jaap Bouma

2018-08-30

This book focuses on corporate sustainability and how it evolves through innovation and new business models. Despite what has been accomplished to date, there is an urgent need for further steps to be taken, and this book presents a nuanced but compelling plea for collaboration between businesses, government and civil society. Drawing upon empirical research, the authors look at recent approaches to corporate sustainability, the circular economy and strategic corporate social responsibility. The book examines these issues from multiple viewpoints, including cultural, social and religious. More specifically, the book explores the freight sector (smart freight leadership), the banking sector (sustainable banking) and Islamic finance and sustainability, detailing the contribution of faith-based organizations to promoting sustainability and the greening of church buildings. Overall, this book captures the emerging new business models and capabilities

firms need to implement sustainability. This book will be of great relevance to students, scholars and professionals with an interest in corporate sustainability, social responsibility, environmental management and eco-innovation.

Meat Quality - Wieslaw Przybylski, PhD
2015-10-15

One of the biggest challenges faced by meat producers today is the requirement to improve the quality of meat while maintaining focus on efficiency and higher yields. Numerous studies have shown that consumers are willing to pay premiums for meat products with guaranteed eating quality. This book examines the complicated multistep process of producing high-quality meat, from the growth of the animals to the final product. It discusses specific aspects of meat quality for beef, pork, and sheep. Meat Quality: Genetic and Environmental Factors covers key topics such as animal welfare, nutrition, pre-slaughter handling, slaughter technology, breeding strategies, and

the influence of common genetic factors on meat quality. It also discusses the latest meat production systems designed to ensure high-quality meat and the role of transgenic animal technology in meat quality. The book devotes separate chapters to beef, pork, and sheep quality, looking at the effects of breed, genetic type, gender, and age on meat quality. The chapters are written by contributors from universities, research institutes, and breeding companies from different countries and continents. The chapters are based on the research and teaching experience of the contributors as well as on a critical evaluation of the current literature. No other book available today covers the key issues regarding meat quality in such a comprehensive way. This book should be of keen interest to students of food technology, nutrition, commodities sciences, and animal sciences, as well as to food scientists and engineers who want to update their knowledge about the determinants of meat quality.

Sustainable and Environmentally Friendly Dairy Farms - Santiago García-Yuste

2020-05-20

Sustainable and Environmentally Friendly Dairy Farms presents an innovative environmental proposal. While chiefly focusing on dairy farms, the environmental solution it describes is applicable to the entire livestock sector. The book is divided into five chapters, the first of which addresses the carbon footprint of dairy farms. Chapter two provides an overview of the animal production system, focusing on the physiology of the ruminant stomach and the greenhouse gases emitted by dairy cows. In turn, the third chapter covers dairy farm systems, explaining both intensive and extensive husbandry systems. The book's final two chapters present the state-of-art in CO₂ capture, and describe a new and innovative CO₂-RFP strategy. Given its scope, the book will be of interest to chemists, biologists, biotechnologists, and researchers active in agriculture and food-

related areas, as well as those working in the food and dairy industry.

Environmental Health Perspectives - 2006-08

Agribusiness - Julian Roche 2019-08-06

Agribusiness offers a unique introduction to the business of agriculture: what agribusiness is, why it matters, what the role of technology is, how trade fits into the picture, what its key risks are, who is lending and investing and why, and what returns they are getting. It is both practical in orientation - focusing on the role of managers in the industry as well as that of lenders and investors - and international in scope - drawing on case studies and interviews with key figures all over the world. The text ranges across various agricultural commodities to stress that there is no 'one size fits all' solution and successful management, lending or investment in agribusiness requires understanding specifics. Readers are introduced to the economics of the supply and demand of food, the role of

agricultural trade, agricultural marketing and farm management along with key business aspects including: Main drivers of agribusiness value; Principal risks of agribusinesses; Agribusiness as an investment class; and Agribusiness lending: why, who and how. This engaging textbook offers a complete guide to the international business of agriculture which is ideal for all students, scholars and practitioners. A selection of eResources is also available to supplement this text, and instructors will find PowerPoint slides, discussion questions, case studies and further teaching materials available to them.

Five practical actions towards low-carbon livestock - Food and Agriculture Organization of the United Nations 2019-11-27

Livestock provide valuable nutritional benefits as well as supporting livelihoods and the resilience of families and communities. Demand for animal products continues to grow in response to rising population and increasing

wealth, especially in low- and middle-income countries. In spite of productivity gains, greenhouse gas emissions from livestock are also increasing. Successful action on climate change through practical action in livestock agrifood systems is an urgent priority, but must not come at the expense of other sustainability objectives, particularly those relating hunger and poverty. Hence there is a need to balance the benefits of animal-source foods and livestock keeping for nutrition, health and livelihoods, with the urgent need to reduce greenhouse gas emissions to tackle the climate crisis, which also threatens food security. The following five practical actions can be widely implemented for measurable and rapid impacts on livestock emissions: 1) boosting efficiency of livestock production and resource use; 2) Intensifying recycling efforts and minimizing losses for a circular bioeconomy; 3) capitalizing on nature-based solutions to ramp up carbon offsets; 4) striving for healthy, sustainable diets and

accounting for protein alternatives; and 5) developing policy measures to drive change. This brief describes how these can be implemented in integrative and sustainable ways, taking account the diversity of livestock systems and enhancing synergies and managing tradeoffs with other sustainable development objectives. FAO can help by providing developing tools, methodologies and protocols for measuring emissions, and supporting the development and analysis of technical and policy options towards sustainable, low-carbon livestock.

Sustainable Protein Sources - Sudarshan Nadathur 2016-10-02

Protein plays a critical role in human nutrition. Although animal-derived proteins constitute the majority of the protein we consume, plant-derived proteins can satisfy the same requirement with less environmental impact. Sustainable Protein Sources allows readers to understand how alternative proteins such as plant, fungal, algal, and insect protein can take the place of more costly and less efficient animal-based sources. Sustainable Protein Sources presents the various benefits of plant and alternative protein consumption, including those that benefit the environment, population,

and consumer trends. The book presents chapter-by-chapter coverage of protein from various sources, including cereals and legumes, oilseeds, pseudocereals, fungi, algae, and insects. It assesses the nutrition, uses, functions, benefits, and challenges of each of these proteins. The book also explores opportunities to improve utilization and addresses everything from ways in which to increase consumer acceptability, to methods of improving the taste of products containing these proteins, to the ways in which policies can affect the use of plant-derived proteins. In addition, the book delves into food security and political issues which affect the type of crops that are cultivated and the sources of food proteins. The book concludes with required consumer choices such as dietary changes and future research ideas that necessitate vigorous debate for a sustainable planet. Introduces the need to shift current animal-derived protein sources to those that are more plant-based Presents a valuable

compendium on plant and alternate protein sources covering land, water, and energy uses for each type of protein source Discusses nutritive values of each protein source and compares each alternate protein to more complete proteins Provides an overview of production, including processing, protein isolation, use cases, and functionality Presents solutions to challenges, along with taste modulation Focuses on non-animal derived proteins Identifies paths and choices that require consumer and policymaker debate and action

Agro-industries for Development - Carlos A. Da Silva 2009

The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. Agro-industries can have a real effect on international development by increasing economic growth and reducing poverty in both rural and urban areas

of developing countries. However, in order to avoid adverse effects to vulnerable countries and people, sound policies and strategies for fostering agro-industries are needed. *Agro-Industries for Development* highlights the current status and future course for agro-industries and brings attention to the contributions this sector can make to international development. The book includes contributions from agro-industry specialists, academic experts and UN technical agencies, chapters address the strategies and actions required for improving agro-industrial competitiveness in ways that can create income, generate employment and fight poverty in the developing world. This book is a co-publication with FAO and UNIDO.

Sustainable Poultry Production in Europe - Emily Burton 2016-04-27

Examining sustainable poultry production systems across Europe, this book contains a selected cross section of papers from the 2014 UK Poultry Science Symposium. It reviews essential topics such as resources and supply chains, the global poultry market, risk management, zoonoses and green issues. Providing a compilation of the most current research in the poultry science and production industry, this book is an important resource for both researchers and professionals.

Securing the 'Rice Bowl' - Hongzhou Zhang 2018-07-03

This book offers a snappy but comprehensive investigation of how the resource needs of today could become the resource conflicts of tomorrow. As the most populous country in the world, the security of China's "rice bowl" is not only a top political priority for China's policymakers but increasingly a critical global concern as the country emerges as a leading food importer and a major player in outward agricultural investment. This book sheds light on China's efforts, both at home and abroad, to safeguard its food security and how these efforts will affect global food systems. This book will be of interest to industry analysts, institutional investors, and scholars of China's global rise.

Design and Applications of Hydroxyapatite-Based Catalysts - Doan Pham Minh 2022-06-15
Design and Applications of Hydroxyapatite-Based Catalysts Essential reference for researchers and experts in industry highlighting

the rapidly growing field of hydroxyapatite-based catalysts and their application in various chemical processes. Hydroxyapatite ($\text{Ca}_{10}(\text{PO}_4)_6(\text{OH})_2$) is the main mineral component of human and animal bones. It is largely applied in the field of biomaterials due to its biocompatibility. Recently, hydroxyapatite-based materials have especially gained a lot of attention by researchers in catalysis, as they are versatile and have shown precious properties of a good catalyst and catalyst support such as excellent ion-exchange capacity, high porosity, very low water solubility, controlled basicity/acidity, and good thermal stability at high temperatures. Design and Applications of Hydroxyapatite-Based Catalysts gives a detailed overview of the synthesis, characterization, and use of hydroxyapatite-based materials in catalysis. It covers synthetic hydroxyapatites (from pure chemicals or waste), natural apatites and materials from eggshells and animal bones. The application of hydroxyapatite-based

catalysts in selective oxidation, deoxygenation, selective hydrogenation, dehydrogenation reactions, organic synthesis, as well as reforming processes and production of energy carriers is reviewed. Moreover, electrocatalysis and photocatalysis using hydroxyapatite-based materials are discussed. Kinetic and mechanism studies of various chemical processes over hydroxyapatite-based catalysts are also presented. This is the first book solely dedicated to hydroxyapatite-based materials and their use in catalysis. Covers synthesis and characterization, surface and structure studies, kinetic and mechanism aspects, and various applications in heterogeneous catalysis, electrocatalysis, and photocatalysis. Aimed at further stimulating research in the field Design and Applications of Hydroxyapatite-Based Catalysts is an indispensable source-of-information for researchers in academia and industry working in catalysis.

[The New Social and Impact Economy](#) - Benjamin

Downloaded from forneworks.ca on by

Gidron 2021-05-11

This edited volume discusses the development of the new social and impact economy in ten countries around the globe. The new social and impact economy is an attempt to conceptualize developments after the 2008 economic crisis, which emphasized the pitfalls of the Neo-Liberal economic system. In the aftermath of the crisis, new organizational entities evolved, which combined social and business objectives as part of their mission. Using data gathered by two recent international research projects—the ICSEM project and the FAB-MOVE project—the book provides an initial portrait of the forces at play in the evolution of the new social and impact economy, linking those to the past crisis as well as to Covid19 and comparing the emergence of the phenomenon in a varied group of countries. The book begins with an overview of the classical definitions of social economy and proposes a comprehensive concept of new social and impact economy, its characteristics, and

sources. Ten country chapters as well as a comparative chapter on international social economy organizations follow. The volume concludes with an overall analysis of the data from the country chapters, forming a typology of social economy traditions and linking it to recent Post Capitalism trends. Creating a conceptual framework to analyze the new phenomena in social economy, this volume is ideal for academics and practitioners in the fields of social economy; social, economic and welfare policies; social and business entrepreneurship in a comparative fashion; social and technological innovation as well as CSR specialists and practitioners.

The Great Climate Robbery - GRAIN

2016-08-22

In The Great Climate Robbery highly respected non-profit Grain connects analysis of the food

system to larger issues affecting the planet, and links peoples' struggles over food to climate change. The collected articles in this book will help readers to understand the ways in which corporations seek to control the food system, and give information and analysis to challenge this control. This book features endorsements from Naomi Klein, Bill McKibben, and Vandana Shiva. Henk Hobbelink is a member of the Grain collective, an international non-profit that works to support small farmers and social movements in their struggles for community-controlled and biodiversity-based food systems.

Principles of Sustainable Finance - Dirk Schoenmaker 2019

Combining theory, empirical data, and policy this book provides a fresh analysis of sustainable finance. It explains the sustainability challenges for corporate investment and shows how finance can steer funding to certain companies and projects without sacrificing return, speeding up the transition to a sustainable economy.

Sustainable Meat Production and Processing - Charis M. Galanakis 2018-10-29
Sustainable Meat Production and Processing presents current solutions to promote industrial sustainability and best practices in meat production, from postharvest to consumption. The book acts as a guide for meat and animal scientists, technologists, engineers, professionals and producers. The 12 most trending topics of sustainable meat processing and meat by-products management are included, as are advances in ingredient and processing systems for meat products, techno-functional ingredients for meat products, protein recovery from meat processing by-products, applications of blood proteins, artificial meat production, possible uses of processed slaughter co-products, and environmental considerations. Finally, the book covers the preferred technologies for sustainable meat production, natural antioxidants as additives in meat products, and facilitators and barriers for foods

containing meat co-products. Analyzes the role of novel technologies for sustainable meat processing Covers how to maintain sustainability and achieve high levels of meat quality and safety Presents solutions to improve productivity and environmental sustainability Takes a proteomic approach to characterize the biochemistry of meat quality defects

Digital agriculture in action - Elbehri, A., Chestnov, R. (eds.) 2021-12-22

This publication on artificial intelligence (AI) for agriculture is the fifth in the E-agriculture in Action series, launched in 2016 and jointly produced by FAO and ITU. It aims to raise awareness about existing AI applications in agriculture and to inspire stakeholders to develop and replicate the new ones.

Improvement of capacity and tools for capturing and processing data and substantial advances in the field of machine learning open new horizons for data-driven solutions that can support decision-making, facilitate supervision and

monitoring, improve the timeliness and effectiveness of safety measures (e.g. use of pesticides), and support automation of many resource-consuming tasks in agriculture. This publication presents the reader with a collection of informative applications highlighting various ways AI is used in agriculture and offering valuable insights on the implementation process, success factors, and lessons learnt.

Water Resources - Alexander Lane 2017-09-12

Over 7 billion people demand water from resources that the changing climate is making more and more difficult to harness. Water scarcity and shortage are increasingly common and conditions are becoming more extreme. Inadequate and inappropriate management of water is already taking its toll on the environment and on the quality of life of millions of people. Modern water professionals have a duty to develop sound water science and robust evidence to lobby and influence national and regional development policy and investment

priorities. We need to be bold and brave to challenge the status quo, argue the case for change, and create a New Water Architecture. *Water Resources: A New Water Architecture* takes a unique approach to the challenges of water management. The stress caused by our desire to live, eat, and consume is examined in the context of Governance, the role of policy, and the commercial world. The authors share their nine-step vision for a New Water Architecture. Written by three industry practitioners, this book provides students, young professionals, policymakers, and those interested in the sustainability of our natural resources with a pragmatic and compelling perspective on how to manage the ultimate resource of our time.

Rethinking Food and Agriculture - Ammir Kassam 2020-10-18

Given the central role of the food and agriculture system in driving so many of the connected ecological, social and economic

threats and challenges we currently face, *Rethinking Food and Agriculture* reviews, reassesses and reimagines the current food and agriculture system and the narrow paradigm in which it operates. *Rethinking Food and Agriculture* explores and uncovers some of the key historical, ethical, economic, social, cultural, political, and structural drivers and root causes of unsustainability, degradation of the agricultural environment, destruction of nature, short-comings in science and knowledge systems, inequality, hunger and food insecurity, and disharmony. It reviews efforts towards 'sustainable development', and reassesses whether these efforts have been implemented with adequate responsibility, acceptable societal and environmental costs and optimal engagement to secure sustainability, equity and justice. The book highlights the many ways that farmers and their communities, civil society groups, social movements, development experts, scientists and others have been raising

awareness of these issues, implementing solutions and forging 'new ways forward', for example towards paradigms of agriculture, natural resource management and human nutrition which are more sustainable and just. Rethinking Food and Agriculture proposes ways to move beyond the current limited view of agro-ecological sustainability towards overall sustainability of the food and agriculture system based on the principle of 'inclusive responsibility'. Inclusive responsibility encourages ecosystem sustainability based on agro-ecological and planetary limits to sustainable resource use for production and livelihoods. Inclusive responsibility also places importance on quality of life, pluralism, equity and justice for all and emphasises the health, well-being, sovereignty, dignity and rights of producers, consumers and other stakeholders, as well as of nonhuman animals and the natural world. Explores some of the key drivers and root causes of unsustainability, degradation of the

agricultural environment and destruction of nature Highlights the many ways that different stakeholders have been forging 'new ways forward' towards alternative paradigms of agriculture, human nutrition and political economy, which are more sustainable and just Proposes ways to move beyond the current unsustainable exploitation of natural resources towards agroecological sustainability and overall sustainability of the food and agriculture system based on 'inclusive responsibility'

Killer Cities - Nigel Thrift 2021-02-10

Killer Cities uses a combination of social theory, polemic and close attention to empirical detail to tell the story of how and why cities cause mass animal death and, in the process, hasten the

destruction of the planet. This book is not just a lament, however. It is an attempt to navigate out of this mess of planned and unplanned violence towards a world in which cities no longer act as killers but become aligned with the lives of other beings. It offers pragmatic ways of diminishing the death toll and changing mindsets without

ever minimizing the dilemmas that inevitably will have to be faced. Killer cities can be rehabilitated so that they offer brighter paths towards the future - for animals, for human beings, and for the planet. A new urban geography could be within our grasp. Indeed, it has to be, for all of our sakes.
