Waterbury Trolleys - Connecticut Motor Coach Museum 2005-06-22

Waterbury Trolleys traces the growth and expansion of the streetcar system throughout the Naugatuck Valley. This system became part of the Connecticut Company's extensive streetcar network, spanning 1,138 miles statewide at its peak in 1918. As automobiles became a primary mode of transportation, the streetcar lines in Waterbury transitioned to bus routes. By 1937, streetcars were officially replaced by buses. This wonderful collection of vintage photographs documents the network of streetcars that once thrived in Waterbury.

American Streamliner, Post-War Years - Carl Byron 2001-01-01

When World War II came to an end in 1945, America was on the verge of an unprecedented economic boom that carried over to its vast rail transportation system. Railroads placed orders for new streamlined passenger trains. Passengers wanted new, fashionable trains with sleek cars and locomotives. In addition, steam was out, diesels were in. Railroads saw good times coming and they prepared well for them. This 200-page color book features 335 photographs in a 10 x 10" hardbound volume. Covers numerous name trains.

Southern Pacific Lines Henry E. Bender 2013

Southern Pacific and its predecessor railroads constructed and maintained depots throughout their territory. Between 1877 and 1894, a series of 26 numbered standard plans for depots was developed, and each plan was successively in use for a few years. By the beginning of the 20th century, there were more than 600 SP depots and telegraph offices. By then, many older depots, as well as most new ones at that time, had been or would be built to these standards. This book describes those depots. "The story of depots in SP's far-flung territory is an interesting one: when they were built, what they looked like, and when they were destroyed or were saved. Particularly for smaller communities, the depot was once an integral part of local life, so the life stories of these depots are an integral part of town history. "In addition to the 26 numbered standard depot designs, SP also built a number of other de facto standard depots, such as the colonnade style, and several such designs are described here. Also included are a group of stuccoed depots, modernized from older buildings, as well as standard-design depots built by predecessor railroads, such as the El Paso & Southwestern. Southern Pacific built each depot with an eye to what was expected to be needed. The overall size of the depot often reflected current or anticipated town size. The agent had quarters upstairs in a two-story depot, essential in places where suitable local housing was not available, but otherwise a one-story depot would be built. Freight rooms were sized according to the expected volume

of business. Well-known depot historian Henry Bender has extensively researched this subject, and presents here an authoritative account of hundreds of SP standard depots, illustrated with a fine collection of photographs. The jacket painting is by noted railroad artist John R. Signor.

Produce Traffic & Trains - Jeff Wilson 2018-08-01

From the late 1800s to the 1960s, the railroad industry faced a unique challenge: What was the best way to ship fresh produce across the U.S. to prevent spoiling? Produce Traffic & Trains looks at the development of refrigerator cars and how their development led to wide-scale growing and shipping of produce. Covered topics include: The development of refrigerator cars, car fleets, and produce terminals. Harvesting, loading, shipping, and delivering fresh produce, and later frozen products. Running express trains, making ice and icing stations, and carrying out perishable operations.
