Plunkett's Engineering & Research Industry Almanac 2006: The Only Complete Guide to the Business of Research, Development and Engineering Jack W. Plunkett 2006-05

This reference book is a complete guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development. We have included companies that are making significant investments in research and development via as many disciplines as possible, whether that research is being funded by internal investment, by fees received from clients or by fees collected from government agencies. In this carefully-researched volume, you'll get all of the data you need on the American Engineering & Research Industry, including: engineering market analysis, complete industry basics, trends, research trends, patents, intellectual property, funding, research and development data, growth companies, investments, emerging technologies, CAD, CAE, CAM, and more. The book also contains major statistical tables covering everything from total U.S. R&D expenditures to the total number of scientists working in various disciplines, to amount of U.S. government grants for research. In addition, you'll get expertly written profiles of nearly 400 top Engineering and Research firms - the largest, most successful corporations in all facets of Engineering and Research, all cross-indexed by location, size and type of business. These corporate profiles include contact names, addresses, Internet addresses, fax numbers, toll-free numbers, plus growth and hiring plans, finances, research, marketing, technology, acquisitions and much more. This book will put the entire Engineering and Research industry in your hands. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

Traffic-Related Air Pollution and Exposure in Urbanized Areas - Bernard Poednik 2021-11-26

Traffic-related pollutions, apart from the emissions from other anthropogenic sources, significantly decrease the air quality in cities. This is especially true in the case of the areas located in the vicinity of communication routes with high traffic intensity. In accordance with the epidemiological studies, the transport emissions affecting road users, both drivers and pedestrians, have a detrimental effect on health and may contribute to numerous serious illnesses. This work presents the characteristics of traffic-related pollution and the factors affecting its concentration in the air. The effects of exposure to traffic-related pollution on health are described as well. The transport emissions in Lublin, Poland, are discussed in detail. The results of previous studies on traffic-related environmental pollution are presented, including pollutant concentrations as well as exposures of drivers and pedestrians along one of the busiest roads. The studies account for different seasons and weather conditions. The methods of reducing traffic-related pollution and prospects for improving the urban air quality are described as well. This book is intended for academics, researchers, engineers and professionals involved in studies and assessment of the road transport impact on the environment.

Calculation ERROR - Roland Mösl 2013-12-16

Die Menschheit hat die Technik für ein dauerhaftes Paradies, aber eine Politik die Hölle auf Erden zu schaffen. Mehr Arbeitslosigkeit, seit zwei Jahrzehnten jedes Jahr ein gescheiterter UN-Klimagipfel, eine Blockade der wirtschaftlichen Entwicklung. Ein System was gegen Mensch, Umwelt und Wirtschaft gerichtet ist und überall im gleichen Maße Schaden anrichtet. Politiker deren Ruf von Jahr zu Jahr schlechter wird, weil sie offensichtlich immer das Gegenteil von dem erreichen, was versprochen wird. Wie kommt man nur mit all den wissenschaftlichen und technischen Fortschritt in eine solch schlecht Lage? Weil sich die Wirtschaftswissenschaft seit 4 Jahrzehnten geweigert hat, die 3 brennendsten Zukunftsfragen unserer Zivilisation zu beantworten, welche 1972 in den „Grenzen des Wachstums“ aufgeworfen wurden: 1.) Sind verschiedene Bereitstellungsketten für denselben Service möglich? 2.) Welche Verknappungen und Preisentwicklungen sind für alle möglichen Bereitstellungsketten wahrscheinlich? 3.) Wie wechselt man von einer Bereitstellungskette zu einer anderen, bevor eine Verknappung die Wirtschaft trifft? Statt an diesen 3 Fragen zu forschen, hat die Wirtschaftswissenschaft nur an ihr eigenes Dogma geglaubt, dass der „perfekte Markt“ alle Probleme löst. Die Weigerung der Wirtschaftswissenschaft verschiedene Fakten und Rechenmethoden zu verwenden bringt unsere Zivilisation an den Rand des Abgrunds. Wir brauchen ein neues Weltbild, eine neue Betrachtungsweise all unserer schweren Probleme: * Peak-Oil-Gas-Kohle-Uran wird bald erreicht sein. □ * Klimaänderung □ * Viele Länder in einer Krise: Handelsbilanzdefizit größer Ölimporte. □ * Die verlorene Generation - Jugendarbeitslosigkeit. □ * Working poor - der Lohn reicht nicht zum Leben aus. □ * Viel zu geringe Investitionen in die Realwirtschaft. Nur eine neue weltweite Bewegung, kann uns eine sichere und lebenswerte Zukunft bringen. Das ist das Buch, dieses neue Weltbild zu entwerfen, diese neue weltweite Bewegung zu gründen.

Chancen und Risiken der Elektromobilität in der Schweiz - Rainer Zah 2013

Elektrofahrzeuge können einen Beitrag zu umweltfreundlicherem Verkehr leisten - Voraussetzung ist, dass sie mit CO₂-armem Strom betrieben werden. Aber auch Fahrzeuge mit Verbrennungsmotor werden in Zukunft deutlich effizienter werden. Der CO₂-Ausstoss der schweizerischen Autoflotte wird daher trotz Bevölkerungs- und Mobilitätswachstum zurückgehen. Dieser Trend zu weniger Energieverbrauch wird durch die Elektromobilität zusätzlich gefördert. Vor allem kleinere und leichtere Fahrzeuge lassen sich gut elektrifizieren - dank Fortschritten in der Batterietechnik zunehmend ohne Kompromisse. Energieversorger und ÖV-Betreiber fördern den Trend, indem sie die Nutzung urbaner Kleinwagen und gemischter Mobilitätsformen erleichtern. Mehr Elektromobilität führt zu geringeren Treibstoffzoll-Einnahmen, was Finanzierungslücken bewirkt und den Wechsel hin zu einer fahrleistungs- und effizienzabhängigen Besteuerung beschleunigt. Sie reduziert auch die Abhängigkeit von Erdöl und erlaubt die Integration erneuerbarer, lokal erzeugter Elektrizität. Demgegenüber beschleunigt sich die Verlagerung der Umweltbelastung von der Strasse hin zu Herstellung und Entsorgung. Nachhaltige Elektromobilität erfordert daher auch die Ausweitung des energiepolitischen Sichtfeldes auf den ganzen Lebenszyklus und ein Schliessen der Ressourcen-Kreisläufe.

Small Electric Vehicles - Amelie Ewert 2021

This edited open access book gives a comprehensive overview of small and lightweight electric three- and four-wheel vehicles with an international scope. The present status of small electric vehicle (SEV) technologies, the market situation and main hindering factors for market success as well as options to attain a higher market share including new mobility concepts are highlighted. An increased usage of SEVs can have different impacts which are highlighted in the book in regard to sustainable transport, congestion, electric grid and transport-related potentials. To underline the effects these vehicles can have in urban areas or rural areas, several case studies are presented covering outcomes of pilot projects and studies in Europe. A study of the operation and usage in the Global South extends the scope to a global scale. Furthermore, several concept studies and vehicle concepts on the market give a more detailed overview and show the deployment in different applications.

Energy and Sustainability V - H.H. Al-Kayiem 2014-12-16

Energy and Sustainability V is the proceedings of the 5th International Conference on Energy and Sustainability, held by the Wessex Institute of Technology. The modern world is highly dependent on the exploitation of fossil fuels. More recently, resources depletion and severe environmental effects deriving from the continuous use of these fuels has resulted in an increasing amount of interest in renewable energy resources and the search for sustainable energy policies. The changes required to progress from an economy mainly based on hydrocarbons to one taking advantage of sustainable energy resources are massive and require considerable scientific research as well as engineering systems. The effect also involves collaboration between different disciplines in order to arrive at optimum solutions, including buildings, energy networks, convenience systems, new energy storage solutions, waste to energy technologies, and many others. This book covers topics related to sustainability in energy and power production, storage, distribution and management. These include: Smart grids; Smart metering; Green ICT; Green buildings; Energy storage; Renewable energy resources; Plug-in Hybrid Vehicles (PHEV); Biofuels (solid, liquid, gas); Waste to energy; CO₂ capturing and management; Energy and transportation; Environmental risk; Energy policies; Greener power plant technologies; Hydrogen recovery techniques; Sustainable energy production.

Battery Operated Devices and Systems - Gianfranco Pistoia 2008-09-24

Battery Operated Devices and Systems provides a comprehensive review of the essentials of batteries and battery applications as well as state-of-the-art technological developments. The book covers the most recent trends, especially for the ubiquitous lithium ion batteries. It lays particular emphasis on the power consumption of battery operated devices and systems and the implications for battery life and runtime. Battery management is also dealt with in detail, particularly as far as the charging methods are concerned, along with the criteria of battery choice. This book describes a variety of portable and industrial applications and the basic characteristics of all primary and secondary batteries used in these applications. Portable applications include mobile phones, notebook computers, cameras, camcorders, personal digital assistants, medical instruments, power tools, and portable GPS. Industrial applications range from aerospace and telecommunications to emergency systems, load levelling, energy storage, toll collection,

different meters, data loggers, oil drilling, oceanography, and meteorology. The book also discusses wireless connectivity, i.e. Wi-Fi, Bluetooth and Zigbee, and concludes with some market considerations. Links to further reading are provided through the 275 references. This book will be a valuable information source for researchers interested in devices and systems drawing power from batteries. It will also appeal to graduates working in research institutions; universities and industries dealing with power sources and energy conversion; civil, electrical and transport engineers; and chemists. A comprehensive review of battery applications Includes 209 figures and 62 tables Describes state-of-the-art technological developments

Hybrid Systems and Multi-energy Networks for the Future Energy Internet - Yu Luo 2020-08-28

Hybrid Systems and Multi-energy Networks for the Future Energy Internet provides the general concepts of hybrid systems and multi-energy networks, focusing on the integration of energy systems and the application of information technology for energy internet. The book gives a comprehensive presentation on the optimization of hybrid multi-energy systems, integrating renewable energy and fossil fuels. It presents case studies to support theoretical background, giving interdisciplinary prospects for the energy internet concept in power and energy. Covered topics make this book relevant to researchers and engineers in the energy field, engineers and researchers of renewable hybrid energy solutions, and upper level students. Focuses on the emerging technologies and current challenges of integrating multiple technologies for distributed energy internet Addresses current challenges of multi-energy networks and case studies supporting theoretical background Includes a transformative understanding of future concepts and R&D directions on the concept of the energy internet

Practice and Innovations in Sustainable Transport - Tariq Muneer 2020-05-28

The book continues with an experimental analysis conducted to obtain accurate and complete information about electric vehicles in different traffic situations and road conditions. For the experimental analysis in this study, three different electric vehicles from the Edinburgh College leasing program were equipped and tracked to obtain over 50 GPS and energy consumption data for short distance journeys in the Edinburgh area and long-range tests between Edinburgh and Bristol. In the following section, an adaptive and robust square root cubature Kalman filter based on variational Bayesian approximation and Huber's M-estimation is proposed to accurately estimate state of charge (SOC), which is vital for safe operation and efficient management of lithium-ion batteries. A coupled-inductor DC-DC converter with a high voltage gain is proposed in the following section to match the voltage of a fuel cell stack to a DC link bus. Finally, the book presents a review of the different approaches that have been proposed by various authors to mitigate the impact of electric buses and electric taxis on the future smart grid.

25 Things You Need to Know About the Future - Christopher Barnatt 2012-01-19

The essential book for understanding the challenges and technologies that will shape the next few decades How will we live in the future? And what will the human race become? Will we nurture designer babies, be served by intelligent robots, have personal 3D printers, and grow products on the vine using synthetic biology? Or will shortages of oil, fresh water and other natural resources constrain our lifestyles and lead to industrial decline? In this fascinating guide, futurist Christopher Barnatt examines 25 known challenges and technologies that will help shape the next few decades. From Peak Water to vertical farms, nanotechnology to augmented reality, and electric cars to space travel, a startling picture is painted of future possibilities that no individual or business will be able to ignore. Highlighting life-changing research and innovation from over 250 companies, universities and non-profit organizations around the globe, 25 Things You Need to Know About the Future is a startling, frightening and powerful blueprint for anybody who wants to future gaze or future shape.

Hynes Car Guide 2007 - Richard Dredge 2007-08-15

This pocket-sized, illustrated guide covers every significant make and model of car sold in Europe and North America during the 2006-2007 model year, from giants like Ford and VW to small-scale manufacturers such as Morgan and Noble. Each model is pictured in color, with a data table providing vital statistics to enable comparisons between models. Providing full details for over 700 cars and stretching to 400 pages, this is a must-have reference source and a useful "spotter's guide" for all car enthusiasts.

Planning and Operation of Plug-In Electric Vehicles - Mehdi Rahmani-Andebili 2019-05-14

This book highlights the latest advancements in the planning and operation of plug-in electric vehicles (PEV). In-depth, the book presents essential planning and operation techniques to manage the PEV fleet and handle the related uncertainties associated with the drivers' behavior. Several viewpoints are presented in the book, ranging from the local distribution companies to generation companies to the aggregators. Problems such as parking lot allocation and charging management are investigated, taking into consideration the technical, geographical, and social aspects in a smart grid infrastructure. Discusses the technical specifications of electrical distribution and generation systems; Models drivers' behavior from the sociology and economic points of view; Considers the real geographical characteristics of area and driving routes in San Francisco, CA, US; Chicago, IL, US; and Tehran, Iran.
