Gene Drives on the Horizon - National Academies of Sciences, Engineering, and Medicine 2016-08-28
Research on gene drive systems is rapidly advancing. Many proposed applications of gene drive research aim to solve environmental and public health challenges, including the reduction of poverty and the burden of vector-borne diseases, such as malaria and dengue, which disproportionately impact low and middle income countries. However, due to their intrinsic qualities of rapid spread and irreversibility, gene drive systems raise many questions with respect to their safety relative to public and environmental health. Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back, questions about the ethics surrounding use of this research are complex and will require very careful exploration. Gene Drives on the Horizon outlines the state of knowledge relative to the science, ethics, public engagement, and risk assessment as they pertain to research directions of gene drive systems and governance of the research process. This report offers principles for responsible practices of gene drive research and related applications for use by investigators, their institutions, the research funders, and regulators.

Index of Economically Important Lepidoptera - Bin-Cheng Zhang 1994
This book has been derived from the Arthropod Name Index (ANI) database of CAB INTERNATIONAL. In its current form, the ANI database provides a checklist of about 95,000 names and synonyms, plus details of the position of each species within the hierarchy of arthropod classification. To generate this volume, information for the major Lepidoptera on common names, geographical distribution, host range and status of the recorded pest or beneficial species, has been added. It includes records of about 6,000 species (plus another 6,000 synonyms) of harmful and beneficial Lepidoptera that have been recorded in scientific publications over the past 80 years and abstracted for inclusion in Review of Agricultural Entomology and its predecessors. Most species listed are pests as a result of their larvae feeding on plants, but beneficial species such as the silk moths and species of current or potential use in biological control as predators of mealybugs, scale insects and other pests and weeds, are also included. The host plants listed and information on geographical distribution nevertheless emphasise the insects' importance in crop production. The book is thus an essential reference for agricultural entomologists.

Corporate Social Responsibility in India - Bidyut Chakrabarty 2012-03-29
Presenting an analysis of Corporate Social Responsibility (CSR) in India, this book looks at the unique roots of the concept in India. It examines Gandhi's philosophical moorings that inform India's approach to CSR, and the role of civil society in setting an agenda for championing the rights of the stakeholders. The book goes on to focus on the role of the government in grooming the Indian business to be sensitive of its social concerns. Drawing on rich empirical data, the book shows that CSR in India cannot be conceptualized in ethnocentric terms. Arguing that it is not about 'the typical Indianness' of the articulation, it emphasizes the point that CSR in India needs to be conceptualized in a wider perspective by taking into account its philosophical roots with reference to the prevalent socio-economic and political context. The book is a valuable contribution to the literature on CSR, and is of interest to scholars of Asian Studies, business and development studies.
