Stereo: Comparative Perspectives on the Sociological Study of Popular Music in France and Britain

Dr Hugh Dauncey 2013-01-28

The term 'Popular Music' has

traditionally denoted different things in France and Britain. In France, the very concept of 'popular' music has been fiercely debated and contested, whereas in Britain and more largely throughout what the French describe as the 'Anglo-saxon' world 'popular music' has been more readily accepted as a description of what people do as leisure or consume as part of the music industry, and as something that academics are legitimately entitled to study. French researchers have for some decades been keenly interested in reading British and American studies of popular culture and popular music and have often imported key concepts and methodologies into their own work on French music, but apart from the widespread use of elements of 'French theory' in British and American research, the 'Anglo-saxon' world has remained largely ignorant of particular traditions of the study of popular music in France and specific theoretical debates or organizational principles of the

making and consuming of French musics. French, British and American research into popular music has thus coexisted - with considerable cross-fertilization - for many years, but the barriers of language and different academic traditions have made it hard for French and anglophone researchers to fully appreciate the ways in which popular music has developed in their respective countries and the perspectives on its study adopted by their colleagues. This volume provides a comparative and contrastive perspective on popular music and its study in France and the UK.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles -

National Research Council 2015-09-28

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several

decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform

The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards. BMW Z4 - David Lightfoot 2004 BMW Z4: Design, Development and Production is the story of the creation of the Z4 from the

first concept in the summer of 1998 until the delivery of customer cars in October 2002. David Lightfoot had exclusive access to the designers, engineers, and production personnel involved in the Z4, and provides an exciting behind-the-scenes look into the process. Never before has the story been told of how BMW brings together creative people and world renowned technical resources to deliver dream machines to its devoted clientele. David Lightfoot is a BMW enthusiast of the first order. He writes for Roundel, the publication of the BMW Car Club of America, on topics ranging from BMW history to future products and development. A particular interest is high performance driving; he has been an instructor with his local BMW Club for more than 20 years. The irony of his driving style and his last name have been brought to his attention many times. He is a lifelong resident of Seattle, Washington. This is his first book.
